

NewPokerSoft

poker for life

**Usable poker calculator
for Holdem,
Omaha and Omaha Hi/Lo**

www.newpokersoft.com

I. General description

We would like to present poker calculator (PC). This program allows you to calculate the probability of winning your pocket cards against random cards your opponents. The number of opponents may be from 1 to 9. PC supports Texas Hold'em, Omaha & Omaha Hi/Lo.

The program has two levels Base (only Holdem) and Pro (Hold'em, Omaha & Omaha Hi/Lo). The program is free for Base level. For Pro level the program is commercial.

Detailed information is available on www.newpokersoft.com.

Software prerequisites:

- Microsoft Visual C++ 2010 Redistributable
(<http://www.microsoft.com/en-us/download/details.aspx?id=5555>)

II. Program registration and the basics

Run the program. The program will look like this straight after the start.

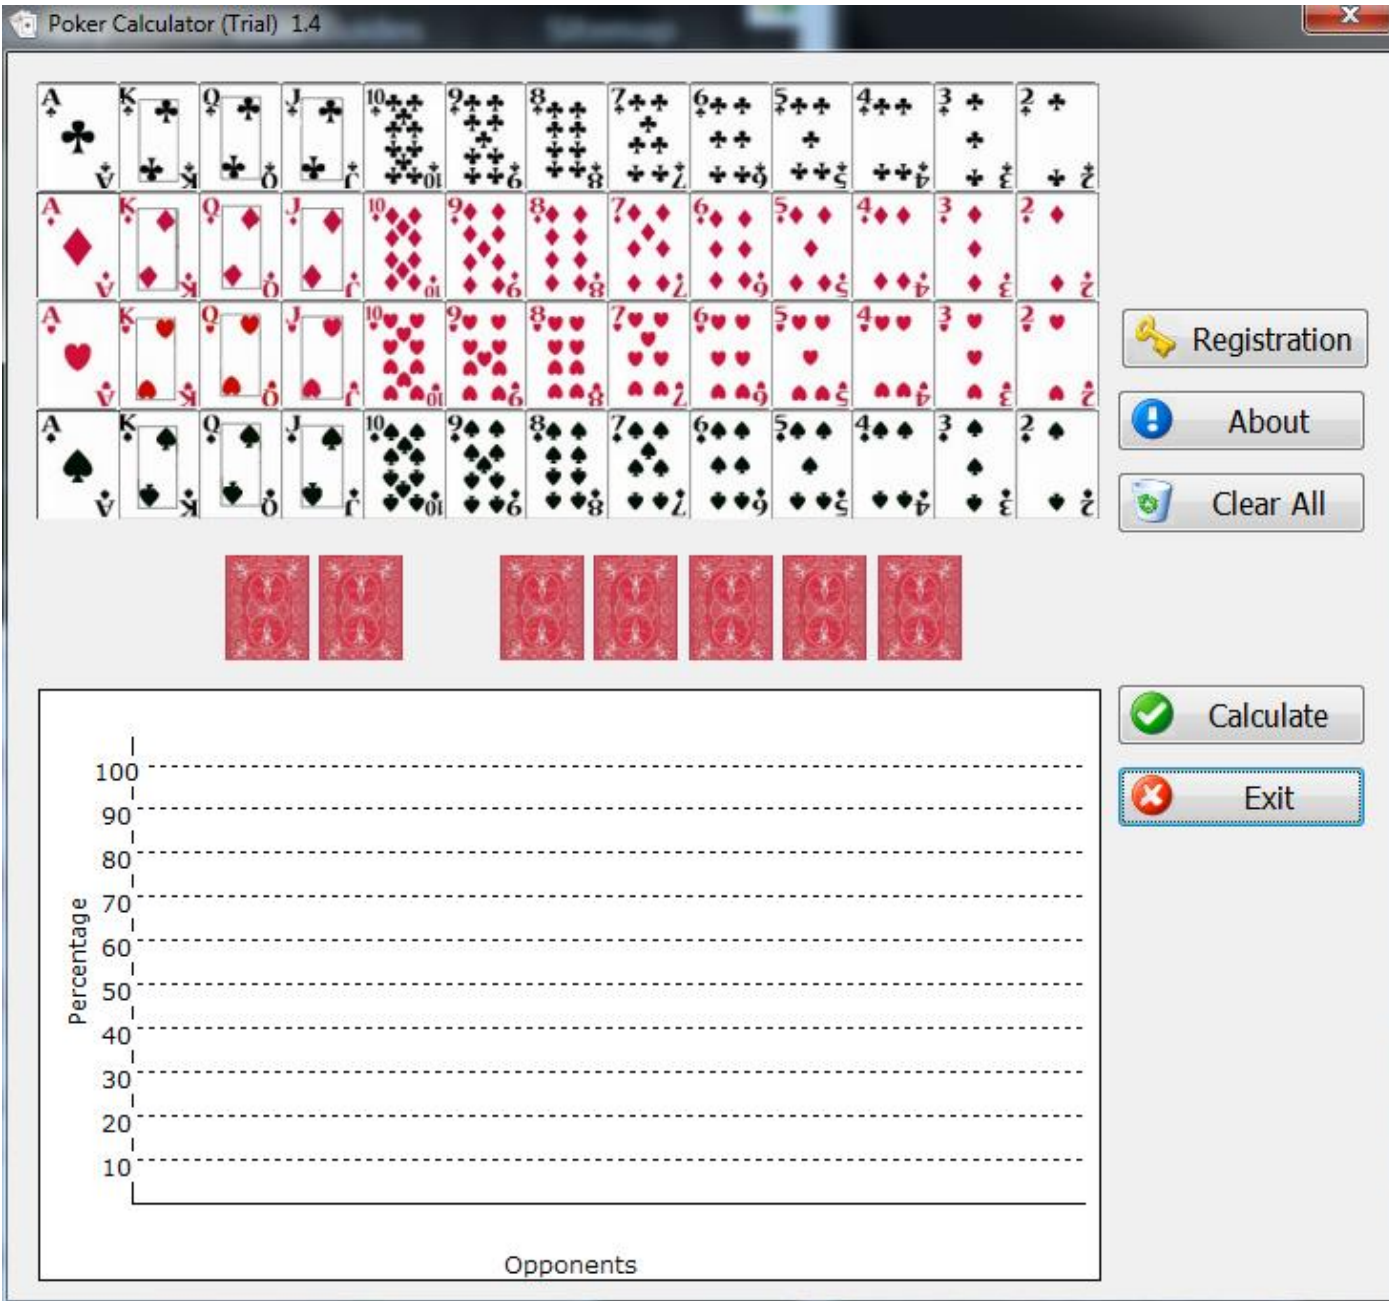

Fig. 1 Initial view

Press this button  on the right and the dialog pops up as on Fig.2

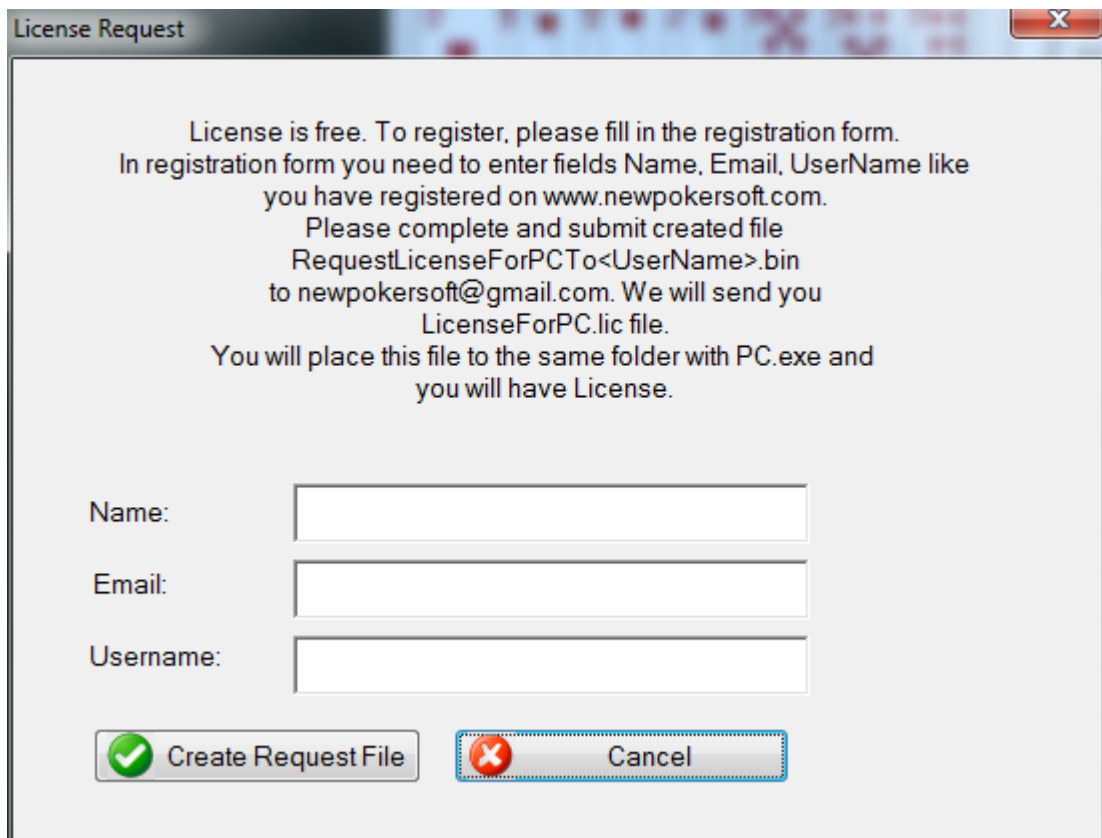

Fig. 2 License Request Dialog

Price is available on the website. Press *Create Request File* button once you have proceeded with payment. The request license file will be created, then you need to send this file as an attachment in an email to newpokersoft@gmail.com. You will receive the file *LicenseForPC.lic* in return. Please copy the new file to the installation folder (where the file *PC.exe* is located).

Once you have a license, the (*Trial*) disappears in Title bar.

Choose AcKd and press *Calculate* button
